

Ammunition for the GTJC Zombie shoot

Most of the targets for the match will be of the paper variety, any serviceable ammunition will suffice for these targets.

Steel plates:

We prefer lead ammunition to be used, but realize that many modern weapons require the use of jacketed/plated ammunition. No Steel core, hollow-point or +p/ magnum ammunition is to be used shooting steel plates, steel core, hollow-point and +P/magnum ammunition damages the steel. FN 5.7 will not be allowed on steel targets. If you prefer magnum/+P ammunition (examples, FN 5.7, 7.62 Tokarev, 10mm, 44mag, 357sig, 357 mag) be sure to bring at least 50 rounds of ammo suitable to engage steel plate, lead bullet if possible, below 1000 fps velocity, or a second gun of lesser caliber. We will attempt to put out prior to the shoot the number of steel targets to be used.

Please make sure the ammunition you use functions through your weapon of choice, and is of sufficient quality. If a shooter starts experiencing multiple failures of ammunition, I.E. squib loads, duds, hang-fires, etc. the shooter may be asked to discontinue using said batch of ammunition.
