

Ammunition for the GTJC Zombie shoot

We prefer lead ammunition to be used, but realize that many modern weapons require the use of jacketed/plated ammunition. No hollow-point or +p/ magnum ammunition is to be used as there will be some shooting of steel plates, hollow-point and +p/magnum ammunition damages the steel.

Please make sure the ammunition you use functions through your weapon of choice, and is of sufficient quality. If a shooter starts experiencing multiple failures of ammunition, ie, squib loads, duds, hang-fires, etc. the shooter may be asked to discontinue using said batch of ammunition.
